Qlik NPrinting™

Spread Knowledge and Insight

Qlik NPrinting is a next-generation reporting and distribution solution for Qlik Sense® and QlikView®, helping spread knowledge and insight across the organization and beyond. Qlik NPrinting offers reporting in widely adopted, portable formats such as Microsoft Office and pixel perfect .PDF, using data and analytics from Qlik Sense and QlikView. It ensures that the right reports get to the right people, how and when they need them, through centralized distribution and a new online subscription hub for user self-service. And, with multi-threaded, multi-engine scalability and role-based security, Qlik NPrinting offers enhanced support for large enterprise deployments.

With Qlik NPrinting, Qlik can serve as a single solution for both interactive analytics and reporting, allowing organizations to retire legacy BI systems and encourage recipients to adopt interactive analytics to see the whole story in their data.

Create Great Looking Reports Fast

Qlik NPrinting™ allows users to develop great looking reports using data and analytics from Qlik Sense® and QlikView®. Reports can be created in a variety of popular formats such as Microsoft Office (PowerPoint, Excel, and Word), highly polished pixel perfect reports, and HTML reports for web publication. Report development is straightforward and powerful, with drag-and-drop simplicity, built-in report editors, and advanced pixel-perfect formatting, banding, and scripting. Qlik Sense and QlikView analytics from multiple apps can be combined into a single report. And with a new, web based client, organizations can effectively manage and secure multi-developer environments.

The Right Reports for the Right People

Qlik NPrinting ensures that the right reports get to the right people, how and when they need them. Reports can be centrally scheduled or run conditionally, generated with filtered information customized to the user, and delivered through a variety of channels including email, save to disk, and web. The new "newstand" portal allows users to search for and browse reports, view past versions (archives), and set up delivery schedules in a secure, self-service environment. And, organizations can now distribute reports directly to the Qlik Sense hub, offering users a single point of access for all their analytics and reporting needs.

Collaborative Analytics for the Enterprise

Qlik NPrinting features multi-threaded, multi-engine scalability and role-based security that supports the demands of large enterprises. The new NPrinting engine is multi-threaded, and supports clustering, allowing a number of engines to run in parallel, improving scalability and reliability for large volume deployments. Role-based security allows administrators to control and manage access to development and reporting features at a granular level, and a new web-based user interface supports multi-developer environments.

With Qlik NPrinting, Qlik can serve as a single solution for both interactive analytics and reporting. The same data models can be used for both purposes, allowing organizations to retire legacy BI systems and save significant costs. And, organizations can include links to live analytics apps in report distributions, encouraging passive consumers to adopt interactive analytics to explore their data further. Confidence is improved, complexity is reduced, and more people can see the whole story that lives within their data.

About Qlik®

Qlik (NASDAQ: QLIK) is a leader in visual analytics. Its portfolio of products meets customers' growing needs from reporting and self-service visual analysis to guided, embedded and custom analytics. Approximately 37,000 customers rely on Qlik solutions to gain meaning out of information from varied sources, exploring the hidden relationships within data that lead to insights that ignite good ideas. Headquartered in Radnor, Pennsylvania, Qlik has offices around the world with more than 1700 partners covering more than 100 countries.
